Experience

Mar 2015 - Current

Biggin's Door Refinishing | San Antonio, Tx

Lead Refinisher

- Supervised a crew of up to 3 employees, ensuring timely and quality completion of projects
- Handled customer communications, including first contact and job preparations
- Maintained an organized and efficient work environment
- Developed and implemented procedures for employees, resulting in increased productivity and quality of work

Sept 2013 - Mar 2015

AgencyRM | San Antonio, Tx

Customer Service Rep

- Resolve customer issues in a timely and efficient manner, ensuring a positive customer experience.
- Document customer interactions and feedback in the company CRM system to maintain accurate records and improve service delivery.
- Schedule client appointments with their designated agents for consultations, ensuring a smooth and efficient process for clients and agents alike.

Projects

Rappor (MVP deployed but under further developments)

Deployed @ <https://rappor-social-media.herokuapp.com/>

Social media application built using the MERN stack, providing a platform for users to connect and engage through comments and upvotes. Rappor aims to provide a unique and engaging social media experience that sets it apart from other platforms.

The Tech Blog

Deployed @ <https://hidden-fjord-74981.herokuapp.com/>

Web application built using the MVC design pattern and a MySQL database through Sequelize, providing a platform to share insights and ideas on technology-related topics.

My Portfolio

Deployed @ <https://taylor-turners-portfolio.herokuapp.com/>

This portfolio application is built using React and an Express server, offering a dynamic and interactive way to showcase my skills and projects. The application includes a Nodemailer package that enables users to send messages directly through the webpage to me, providing a convenient way to connect with potential employers or clients.

Weather Application

Deployed @ <https://bonee94.github.io/Taylors-Weather-Application>

This weather application allows users to input a city or state and receive a 5-day forecast of the weather in that area. The application is built using standard web development technologies such as HTML, CSS, and JavaScript.
